

Rapid : The Safety App

Try not to hold back to be a Casualty!

In the emerging era of the internet, people all over the world are connected to each other. In today's world each and every person owns a personal mobile device. Even though technology has made major contributions towards the development of the human era, Crimes have increased either way, through the internet or physical. Although internet crimes are taken care of by cybersecurity, major steps have not been taken for physical crimes.

Rapid helps you to defend yourself with just a few clicks on your Mobile Device.

With Rapid you can:

- Choose your Trusted contacts and seek help from the nearest Rapid users.
- Activate the Alert with just 5 clicks of your Power button.
- The routes which are displayed to reach to the triggered User, it is redirected to Google Maps providing the easiest and shortest route.

How does Rapid work?

- Victim will click the Power Button of their mobile devices 5 times, letting the screen on and off frequently, till the alarm goes on.
- System will receive the alert and broadcast the victim's information and location to the group nearby within a range of 3km.
- The nearby groups will receive the alert and the location of the victim which will allow them to volunteer to help the targeted victim.
- After the victim is rescued, the groups are notified by the victim themselves, through the Safe/Unsafe button provided.
- For additional safety measures, the alert will be sent to Government bodies like, Police, Ambulance, Fire Brigade.
